Odometer readings that exceed the recorded value by 2% or more are classified as inconsistent, as such deviations are generally not attributable to control unit errors.

The mileage check using OBD technology identifies only indicators of potential tampering. There is no guarantee of exact mileage accuracy, particularly in vehicles that have been professionally altered by third parties. This check provides only supportive information and does not replace a comprehensive vehicle assessment.

The VIN check is performed by reading the data stored in the vehicle system using OBD technology. This check verifies consistency with the vehicle documents and can help identify discrepancies.
